## New York Report

### Introduction

In 2014, many areas of the country continued to see low housing inventory that has continued from 2012 and 2013. Low inventory has slowed home sales, but has resulted in an increase in home sale prices. Survey data from the *Investment and Vacation Home Buyers Survey* show that investment buyers dipped some, but vacation home buyers saw a two year rise. Data from the *Profile of Home Buyers and Sellers* survey showed that both primary residence home buyers and home sellers wanted to and did work with a professional real estate agent or a broker at higher rates than seen in past years. Clients continue to want the expert professional advice that members of the National Association of REALTORS® have provided in the past and continue to provide, as this year's report further illustrates.

The typical number of transactions eased to 11 transactions in 2014 from 12 transactions in the 2013. As a result, gross member income declined slightly to \$45,800 from \$47,700. Income ranges depending on experience, function, and hours worked per week. Nineteen percent of members earned a gross income of less than \$10,000 in 2014, while 24 percent earned more than \$100,000 during the same time period. As most members work on a commission-based salary structure, the rise in income is reflective of fewer home sales. As such, the brokerage sales volume also declined to \$1.7 million in 2014 from \$1.8 million in 2013. For the second year, difficulty finding the right property was the most cited reason for potential clients being limited. Difficulty obtaining mortgage financing continues to be the second most cited reason.

In 2014, there was an increase of new members of the National Association of REALTORS®. This is apparent in the data, with those who have less than two years of experience increasing from 13 percent to 17 percent. The median years of experience in real estate stayed the same at 12 years from the past report. However, those entering the business may be recent retirees from other industries, as the typical age of members rose from 56 years to 57 years. The tenure at firms continued to a two year decrease—starting at seven years in the 2013 survey and dropping to five years in the 2015 survey.

The typical member is an independent contractor affiliated with an independent company catering to local markets. REALTORS® frequently have had careers in other fields prior to real estate, the most common being in management, business, and financial professions followed by sales and retail. Only five percent indicated that real estate is their first career. The majority of members are women with a college education.

Looking ahead, 84 percent of REALTORS® are very certain they will remain in the market for two more years. This share is higher than the last three years, indicating the optimism that is seen in today's market.

- A substantial majority of REALTORS® – 85 percent – own their primary residence. 88 percent of REALTORS® own their primary residence in New York.

## Methodology

In March 2015, the National Association of REALTORS® mailed and e-mailed an 87-question survey to a random sample of 50,075 REALTORS®. An identical questionnaire was also distributed, via e-mail only, to an additional 130,628 members. Using this method, a total of 6,750 responses were received, including 2,216 via hard copy mail survey and 4,534 via the Web-based survey. After accounting for undeliverable questionnaires, the survey had an adjusted response rate of 3.7 percent. The confidence interval at a 95% level of confidence is +/-1.19% based on a population of 1 million members. In the state of New York, 8,860 surveys were mailed out and received 292 responses; the state report has a 3.29 percent response rate.

Survey responses were weighted to be representative of state level NAR membership. Information about compensation, earnings, sales volume, and number of transactions is characteristics of calendar year 2014, while all other data is representative of member characteristics in early 2015.

The National Association of REALTORS® is committed to equal opportunity in the real estate industry. In accordance with this commitment, racial and ethnic information was collected and is included in this report.

Where relevant, REALTOR® information in subgroups is based on the license held by members of NAR: a broker, broker-associate, or sales agent license. The term “broker” refers to REALTORS® holding a broker or broker associate license unless otherwise noted. In some cases, information is presented by REALTORS®’ main function within their firm or their real estate specialty regardless of the type of license held.

The primary measure of central tendency used throughout this report is the median, the middle point in the distribution of responses to a particular question or, equivalently, the point at which half of the responses are above and below a particular value. Data may not be comparable to previous Member Profile publications due to changes in questionnaire design.
